

Tax Brochure

Self Employed | 2017

A European Comparison

The AGN European Region conducts annual surveys of corporate taxes, parent companies, self employed, value added (VAT), salary and social security and inheritance taxes. These surveys have been produced for a number of years and provide interesting comparisons from year to year and from country to country and give an insight into trends.

Introduction: Changes in our society over several years have led to a reorganisation of work, especially in the development of self-employed activities, which favour flexibility, entrepreneurial skills and mobility. In this context, it seems important to make comparisons among countries and also to highlight differences in treatment between self employed individuals and employees by comparing this survey with the Salary Taxes Survey.

The objective of the survey is to establish how much of a self employed person's gross salary is left after income tax and social security charges. In addition the survey considers what deductions the self employed person is allowed to make when calculating taxable profits. The survey is based on a married individual with two children, annual gross turnover of €130,000, a new car costing €40,000, a new computer costing €2,000, travel expenses of €10,000 and other business expenses of €8,000 leaving net turnover of €100,000.

Countries Covered: The 2017 survey covers 24 countries, 17 EU Member States (including Isle of Man) as well as, Liechtenstein, Switzerland, Ukraine, and Turkey.
